Le concept de maladie émergente regroupe des critères précis qui permettent d'identifier des syndromes ou des agents infectieux potentiellement candidats à l'émergence et qu'il est donc nécessaire de placer sous surveillance pour les agents viraux. La notion d'émergence s'applique à un syndrome qui associe de façon originale une étiologie et des symptômes non observés jusque-là par la médecine. Maladie nouvelle stricto sensu comme le sida, une affection qui n'avait encore jamais été identifiée dans une zone géographique ou un environnement humain donné comme le virus West Nile aux États-Unis, une affection qui réapparaît dans une région où elle avait disparu ou dans un nouvel environnement comme la fièvre jaune ou la dengue hémorragique en Amérique du Sud, une affection dont l'étiologie est nouvellement décrite, maladie connue mais virus récemment identifié comme les fièvres hémorragiques dues aux virus Ebola et Lassa, une affection liée à un nouveau virus issu du réservoir animal et qui induit une pandémie humaine de dimension inégalée. Sars-Cov-2 après le rappel des grandes notions sur les virus émergents ou ré-émergents et les conditions qui les favorisent. L'ouvrage présente l'ensemble des virus émergents actuels en distinguant les virus non véhiculés par les insectes et les arbovirus. Pour chaque virus seront présentés les données virologiques, la physiopathologie, la transmission, l'épidémiologie, les manifestations cliniques, le diagnostic, tests et examens complémentaires, le traitement individuel et communautaire et la prévention. Un chapitre de perspectives et d'hypothèses sur les prochaines pandémies virales qui pourraient survenir. Complète l'ouvrage destiné aux spécialistes qui sont en première ligne pour la surveillance des virus et de leur évolution : virologistes, infectiologues, internistes, biologistes de laboratoire, pharmaciens et vétérinaires. L'ouvrage s'adresse également à tous les praticiens susceptibles d'être confrontés aux manifestations cliniques de ces infections virales et qui doivent pouvoir les suspecter et/ou les traiter : médecins généralistes, médecins humanitaires. Les données historiques et épidémiologiques exposées pour chaque virus pourront concerner un public plus large s'intéressant à ce thème d'actualité.
